

How to create better code for better research?

Where Small Steps Make Big
Differences in Software Quality
and Workflow Quality

Robert Casties (MPIWG)
Julia Damerow (Arizona State)
Daniel Nüst (TU Dresden)
Malte Vogl (MPI Geoanthropology)

**First Research Software Day
Berlin & Brandenburg**
3 June 2026

Workshop

A purple rectangular poster with white text. At the top left, it says 'BERLIN UNIVERSITY ALLIANCE' with a small logo to the right. The main title 'Research Software Day Berlin & Brandenburg' is in large, bold white font. Below it, in smaller white font, is 'trainings! talks! networking!'. Further down, it lists the date and time: 'June 3, 2026 | 9AM - 5PM', the location: 'Cluster of Excellence Matters of Activity', and the address: 'Sophienstr. 22a | 10178 Berlin'. At the bottom left, it says 'Register at: forschungsssoftware.info/RSdays/2026/Berlin'. At the bottom right, there is a small QR code. At the very bottom, it says 'in cooperation with:' followed by logos for 'GESELLSCHAFT FÜR FORSCHUNGSSOFTWARE', 'Matters of Activity', 'DFG', and a small circular logo.

slides

minutes

Let's get to know each other!

- What's your name and affiliation?
- What's your role?
- What is your own project about?
- What programming languages do you typically use/use in your project?
- Have you participated in code reviews before?

A large, faint gear shape in the background with a rainbow gradient, centered behind the title text.

The DHtech Code Review Working Group

Robert Casties, Julia Damerow, Malte Vogl

Agenda

- Who are we and who are you?
- Why code review?
- Our code review process
- Code review as social interactions

DHTech Code Review Working Group

- Started after a workshop at ACH2021.
- Meets monthly
- 5 regular members
- Goal: establish a community code review system.
- <https://dhcodereview.github.io/>

<https://dhcodereview.github.io/>

We are part of DHTech

- Founded at the DH conference in Montreal in 2017.
- Currently over 400 members.
- ADHO SIG since 2021.
- Steering committee of 7 people.
- Slack and mailing list.
- Join us at:

<https://dh-tech.github.io/join>

<https://dhcodereview.github.io/>

Things we do!

- Maintain Awesome Digital Humanities
 - Thank you Moritz Mähr and Diego Siqueira!
- Bi-monthly virtual meetups
- Bi-monthly newsletter
- Job Board
- Literature List
- Working Groups
 - Community Code Review
 - Education & Training
- Other events like:
 - Conference workshops
 - Hackathon
 - Mini-conference 

A large, faint, multi-colored gear logo is centered in the background of the slide. It has a rainbow gradient and a thick black outline.

Why is code review important?

Julia Damerow, Rebecca Sutton Koeser, Malte Vogl

What is code review?

- A developer other than the code author reads the code.
- Goal:
 - Find errors
 - Improve code readability and understandability
 - Improve code quality
- Widespread technique in traditional software development teams.
- Challenge in DH/research: you need more than one developer.

“Traditional” quality measures

- *Code smells*
 - duplicate code
 - variable names like x, y, z
 - long functions
 - spaghetti code
 - ...
- Tests
- Continuous integration
- Documentation
- Linter integration
- Readability

Aspects to consider

- Who will read the code?
 - Researchers?
 - Software engineers?
 - Students?
- How often will it be used?
- Who will use your code?
- What is the purpose of your code?
- Is crashing ok?
- What is the risk if your code has errors?
 - Syntactical errors vs semantic errors
- Who will maintain your code?
- What does reproducibility mean for your code and research?

A large, faint gear-like shape with a rainbow gradient serves as a background for the title text.

The DHTech Community Code Review Process

Julia Damerow, Rebecca Sutton Koeser, Malte Vogl

Current review process (since 2023)

- Quarterly submission deadlines
- Set a timeframe (ideally 2 weeks)
- Kick-off at the beginning and recap meeting at the end via Zoom
- Intermittent communication via Slack
- GitHub pull requests as platform for the review
- Distinct roles:
 - Code Reviewers
 - Code Submitters
 - Facilitator

Results of Adjusted Process

- Recruitment and submissions
 - Quarterly submission deadlines allow for more predictability
- Process
 - Issues with GitHub can be addressed in kick-off meetings
 - All participants are added to repository in kick-off meeting
 - Communication was facilitated due to “face-to-face” (zoom) meetings
- Value
 - Code submitters can direct review to where it’s most needed.
 - Code changes can be made till shortly before kick-off meeting

Results of Adjusted Process

- Recognition
 - Recognition expectations are discussed upfront.
 - Reviewers are added to README and in acknowledgement sections of potential publications.
- Time investment
 - Ideal total time investment:
 - ½ hour kick-off meeting
 - 1 hour review
 - 1 hour recap meeting
 - Set time frame for review increases predictability.
 - “Hidden” labor of coordinating the process is made visible due to facilitator role.

Completed Reviews so Far

- 9 completed reviews as of April 2026
- Programming languages included Python, Javascript, R
- Projects included agent-based models, text analysis algorithms, citation analysis, JavaScript frontends
- Projects included one reproducibility study
- 11 reviewers engaged as of April 2026

Impact of Code Reviews

- Coding issues were identified
- First time hands-on experiences with GitHub for some submitters
- Code quality was improved
- Documentation was improved

Remaining Challenges

- Recruitment of reviewers
 - Sign up as reviewer at <https://dhcodereview.github.io/>!
- Facilitator recruitment and training
- Code submissions
- Coordinating is still non-neglectable time investment
- Recognition for facilitators and reviewers

What Else is Out There?

- Journal of Open Source Software (JOSS)
 - <https://joss.theoj.org/>
 - Checklist for things like license, releases, open source, runnability, ...
- Journal of Computational Literary Studies (JCLS)
 - <https://jcls.io/>
 - Required basic review checks for things like README, execution instructions, folder structure
 - Optional extended review checks further for documentation, runnability, code quality
- CodeChecks
 - <https://codecheck.org.uk/>
 - Reproduce paper or preprint results and providing a certificate for successful reproduction
 - Especially popular in geoinformatics community
- ReproHack
 - <https://www.reprohack.org/>
 - Reproduce paper results from code and data

Code Reviews are Social Interactions

<https://dhcodereview.github.io/>

Observations

- The majority of people agree code reviews are useful and necessary.
- We have regular reviewer and facilitator sign ups.
- We have few code submissions.

Why people don't submit code for review

- **Getting your code criticized can be hard!**
- Less experienced coders might think their code is not “good enough yet.”
- The perfectionist might want to fix just one more thing.
- Developers might be afraid that someone finds an error in their code.
- Developers might think it's not necessary or helpful.

Social interactions are important

- Emphasize the importance of a pleasant experience!
 - We are all friends here.
 - Nobody is better than the other.
 - Everybody's voice and opinion counts.
- Meeting everyone (virtually) face-to-face helps deanonymize the process.
- Kick-off meetings allow focusing the review.
- Final meeting sets a deadline and puts comments into context.

Facilitators are crucial for
setting the tone of the review!

Our process

Code & Code review icons created by Freepik - Flaticon

Recommendations for Reviewers

- Be kind in your review.
 - There is a reason for everything. Nobody writes intentionally “bad” code.
- The code is not the person.
- Be aware of what’s your opinion vs. what would improve the code.
 - What does “improving” the code mean? What is realistic?
 - Comments like *“I would rewrite this from scratch in this way...”* are usually not helpful.
- Comment on what matters in the context of the review.
 - Is a comment such as *“I would switch to package manager X.”* on a fully completed project helpful? Instead, how about *“I started using package manager X recently and I love its features. I’d be happy to show you how I use it if this is of interest to you for your next project.”*
- Focus on what the code submitter requested feedback on.

Recommendations for Submitters

- Reviewers donate their time to help you to improve your code.
- If a reviewer doesn't understand a part of your code, it likely warrants a comment at the minimum if not some rewriting.
- You don't have to follow all recommendations of your reviewer.
- Make sure to clearly articulate your expectations to the reviewer.
 - Don't have them review code that you know you will never touch again.
 - Don't ask them to review parts of your code you are not interested in improving.
- It is ok to ask follow up questions to fully understand a reviewer comment.

Recommendations for Facilitators

- It might feel like a thankless job but you are the glue that holds the review together!
- It can be useful to ask the code submitter at the beginning about their timeframe.
 - Are there any deadlines that need to be met?
 - Will the review still be useful in 2 months?
- If possible find one reviewer with some domain expertise and one with technical expertise.
- Ensure everyone gets a turn to speak and ask questions.

Reproducibility assessment in peer review with CODECHECK

Research Software Day 2026

One thing

about reproducible research

Have a README: all else is details.

Show willingness to help, but don't stop publishing because of lacking docs, your code is **good enough**. It is hard to document for someone else, therefore, document for future you, add more **details on demand**.

“Rule” inspired by Greg Wilson’s Teaching Tech Together (<http://teachtogether.tech/en/index.html>), Rule 1.

One re-execution of *computational workflow* by codechecker during scholarly communication, review & publication

Independent execution of computations underlying research articles.

1. Codecheckers record but don't investigate or fix.
2. Communication between humans is key.
3. Credit is given to codecheckers.
4. Workflows must be auditable.
5. Open by default and transitional by disposition.

CODECHECK Community Workflow

<https://codecheck.org.uk/guide/community-workflow-overview>

For authors

Have a README, find a suitable checklist to use, basic metadata in codecheck.yml, licensing information; acknowledgement in manuscript

For codecheckers (short, extended, in-person events)

Handling repos/files, approaching a workspace/workflow, responsibilities, writing the certificate;
it is a **craft**, so **we mentor** better than we write process descriptions!

For editors (me)

codecheck.org.uk/buddy-exchange

Give one, Get one.

Give one, get one CODECHECK! Create your own CODECHECK request and find open CODECHECK issues that need reviewing.

Available Buddy Exchange

CODECHECK Buddies

This list shows all codecheckers who have received buddy exchange requests.

Buddy Exchange Recipients

No buddy exchange requests found.
No codecheckers have received requests.

AGILE conference success story

From zero to reproducible in
countable steps and observable time

Wait, what's AGILE?

**Association of Geographic Information Laboratories
in Europe** (<https://agile-online.org/>)

- Annual AGILE conference
(<https://agile-online.org/conference-2020>)
- Bi-annual PhD School
(<https://agile-online.org/agile-actions/phd-school>)
- AGILE Initiatives
(<https://agile-online.org/funding-initiatives>)
- Collaboration & MoU with organizations & sister
associations
(<https://agile-online.org/agile-community/cooperatio>
[n](#))

How did we examine *potential* reproducibility?

How we assess reproducibility

How reproducible were AGILE papers?

Nüst, D., Granell, C., Hofer, B., Konkol, M., Ostermann, F. O., Sileryte, R., & Cerutti, V. (2018). **Reproducible research and GIScience: an evaluation using AGILE conference papers**. PeerJ, 6, e5072. <https://doi.org/10.7717/peerj.5072>

Any patterns visible at GIScience conference?

Review paper 2021 for GIScience conference

Ostermann, F. O., Nüst, D., Granell, C., Hofer, B., & Konkol, M. (2021).

Reproducible Research and GIScience: An Evaluation Using GIScience Conference Papers.

Schloss Dagstuhl -

Leibniz-Zentrum Für Informatik.

Reviewer guidelines

Reproducibility reviewer guidelines

Background

REPRODUCIBLE PAPER GUIDELINES

Full and short papers submitted to the AGILE conference **have** to include a **Data and Software Availability** section which documents data, software, and computational infrastructure to support reproduction, or mentions reasons for not publishing them.

The above requirement is the only one to comply with the AGILE Reproducible Paper Guidelines. The remainder of the document provides concrete recommendations for all involved stakeholders to increase transparency, reproducibility, and openness of computational GIScience research. The following table of contents shows the recommended parts for different readers. Familiarity with all sections is, of course, beneficial.

Author Reproducibility Reviewer Scientific Reviewer		
	Reproducibility Checklist Helps to ensure authors and reviewers do not miss anything important.	2
	Author Guidelines Show how to write the Data and Software Availability Section and give practical recommendations to make data and computational workflows reproducible. Writing the Data and Software Availability Section Including Data in Research Papers Including Computational Workflows in Research Papers	4
	Scientific Reviewer Guidelines Describe role in evaluating plausibility and completeness of the data and software availability documentation.	7
	Reproducibility Reviewer Guidelines Describe role and approach to execute workflows and clarify efforts.	8
	Background	10

Further resources

These guidelines can not cover all details of the reproducibility review at AGILE conferences. For more information for authors, translations, and practical examples see the [guidelines wiki](#). For more information about the review process and deadlines, see the [process description](#). For any questions, please visit the AGILE Discourse server's [forum for the Reproducible Paper Guidelines](#).

UPDATE: Have the guidelines worked?

AGILE Reproducibility Review

Reproduced full papers @ AGILE 2019 to 2026

**Most important takeaway
on reproducibility:
Stay curious about what is
possible, don't judge
yourself or others.**

**Some reproducibility is always
better than no reproducibility!**

**If the gold standard seems unreachable,
don't give up, do what you can!**
